

Develop a Python script

DATE	21 November 2022
TEAM ID	PNT2022TMID38437
PROJECT NAME	SMART SOLUTION FOR RAILWAYS
MAXIMUM MARKS	4 Marks

Create a code snippet using python to

1. Extract weather data from Open Weather Map using APIs
2. Send the extracted data to the cloud
3. Receive data from the cloud and view it in the python compiler

The image shows a Python script in a text editor and its execution output in a shell window. The script uses the 'requests' library to fetch weather data from the OpenWeatherMap API for Chennai, India. The output shows the temperature and humidity.

```
import requests
a = "https://api.openweathermap.org/data/2.5/weather?q=Chennai,IN&appid=6d13d12f9cd34a07871a5795d01e2c47"
r = requests.get(url = a)
data = r.json()
print(r)
print(data)
temp = data["main"]["temp"]
hum = data["main"]["humidity"]
print("Temperature is :",temp)
print("Humidity is :",hum)
```

```
<Response [200]>
Temperature is : 298.14
>>>
